DETAILED ACTION

1. Applicant's cooperation is requested in correcting any error of which applicant may become aware in the specification.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement submitted on 09/30/2003, has been considered by the examiner and made of record. See attached form PTO-1449.

Drawings

4. This application has been filed with formal drawings.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686

F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-21, and 32-33 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of copending Application No. 10/722,431. Although the conflicting claims are not identical, they are not patentably distinct from each other because both application discloses same the invention: an optical interconnected circuit or a wavelength multiplexing on-chip optical interconnected, which comprising a substrate; a micro tile elements installed on the substrate; having light emitting and receiving function; and an optical waveguide having an optical waveguide member formed on the substrate to connected at least the two micro tile elements to each other.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

6. Claims 22-31 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the claims are allowable over prior art of record because none of the references in alone or in combination discloses:

A method of manufacturing an optical interconnection circuit, comprising:

- bonding a plurality of micro tile elements to a substrate; and
- installing an optical wave-guide member on the substrate to connect at least two micro tile elements to each other.

The method of manufacturing an optical interconnected circuit above is critically, since the method reduces complicated so as reduces the cost, reduces the time for manufacturing , and makes it easy to downsize an optical transmission device. The method also made an optical transmission medium is easily connected to a light-emitting element, and a light-receiving element.
